

Supplementary material

Appendix 1 List of sampled individuals used in this study. Samples are sorted by populations.

Appendix 2 Microsatellites loci used in the present study including primer sequence, allele size inbp, source and species for which loci were isolated.

Appendix 3 Pairwise values of F_{ST} (microsatellites) among populations of little owl *Athene noctua*. Values marked with asterisk are significant ($p < 0.05$).

Appendix 4 Estimated number of populations (K) from the software Structure for the European little owl. (a) Rate of change in log-likelihood values (ΔK) (Evanno et al. 2005). The maximum ΔK indicates the most likely number of populations. (b) The mean $\ln P(D)$ (Pritchard et al. 2000) of 5 runs conducted for each K for the multilocus genotype data generated. A plateau in likelihood values indicates the most likely number of populations. (c) Inference of the number of genetic clusters by discriminant analysis of principal components (DAPC).
