

Rocha, A. V., Cabanne, G. S., Aleixo, A., Silveira, L. F., Tubaro, P. and Caparroz, R. 2020. Pleistocene climatic oscillations associated with landscape heterogeneity of the South American dry diagonal explains the phylogeographic structure of the narrow-billed woodcreeper (*Lepidocolaptes angustirostris*, Dendrocolaptidae). – J. Avian Biol. 2020: e02537

Supplementary material

Table S1. Tissue samples of *Lepidocolaptes angustirostris* analyzed in this paper. LOC correspond to locality numbers showed in Figure 1. Geographic coordinates are expressed in decimal degrees.

Table S3. Pairwise Φ_{ST} values among *Lepidocolaptes angustirostris* lineages. The values on the lower diagonal represent the mitochondrial gene (ND2) based on K2P distance matrix. The values on the upper diagonal represent the nuclear gene (FIB5) based on p-distance matrix. Significant values ($p < 0.05$) are showed in bold.

	Caatinga	W_Cerrado	NE_Cerrado	Chaco	E_Cerrado
Caatinga	-	0.197	0.012	0.213	0.022
W_Cerrado	0.737	-	0.577	0.002	0.175
NE_Cerrado	0.707	0.700	-	0.447	0.027
Chaco	0.803	0.644	0.763	-	0.187
E_Cerrado	0.709	0.484	0.646	0.490	-

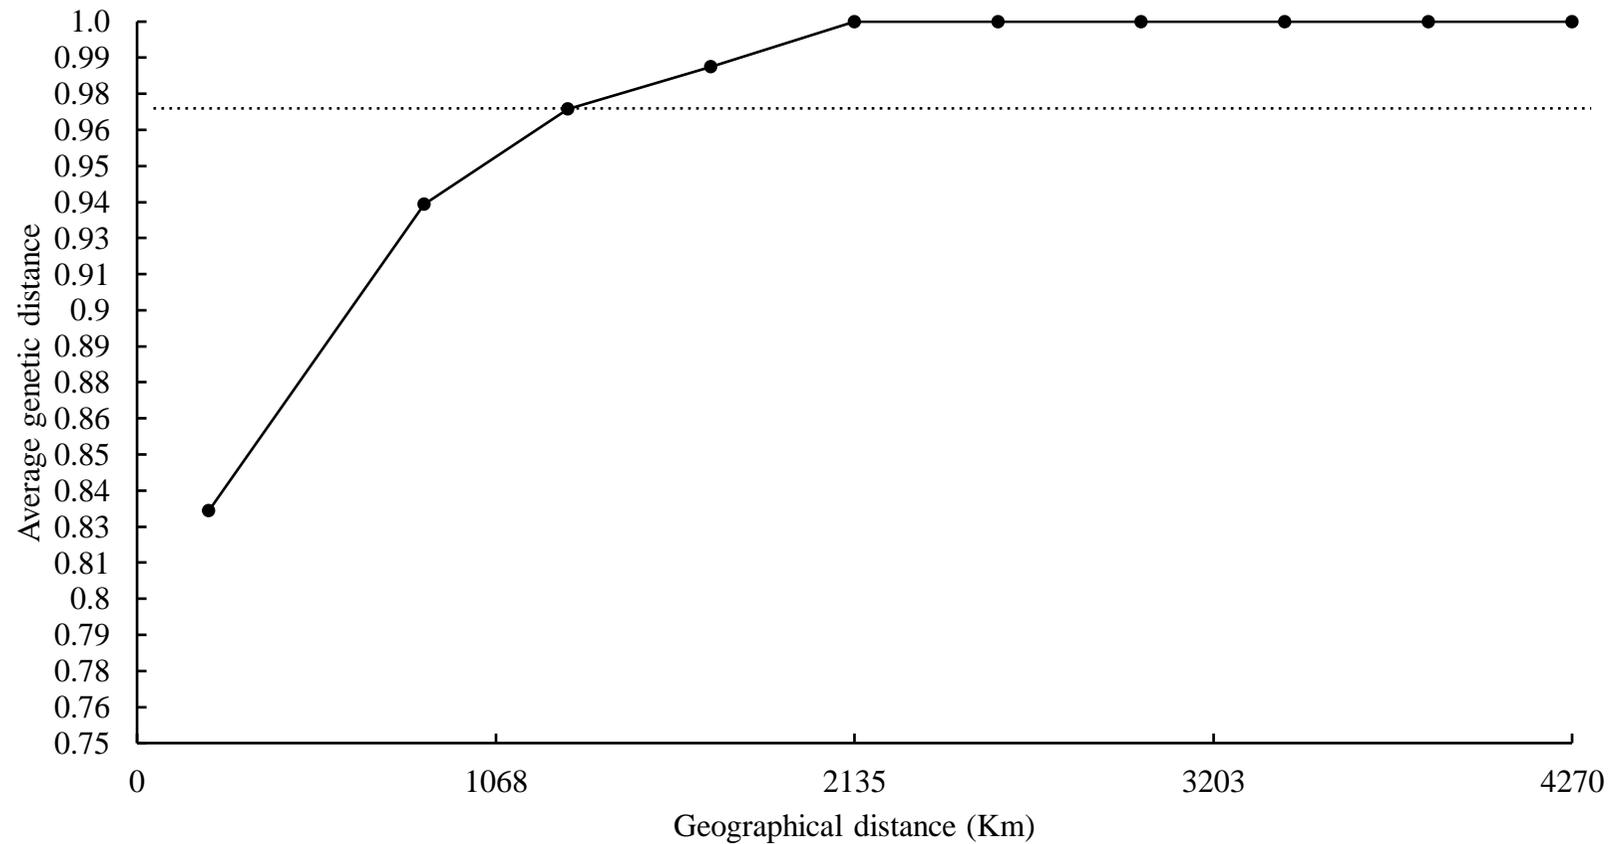

Figure S1. Spatial autocorrelation analysis for *Lepidocolaptes angustirostris* based on average genetic distance of ND2 gene between pairs of individuals that fall within distance class y , considering 10 classes and 1,000 permutations. Dotted line corresponds the null hypothesis of non-difference of a correlation by chance. Dots below the dotted line represent the geographical classes with spatial autocorrelation whereas the dots above the dotted line represent the classes where there is not special autocorrelation.

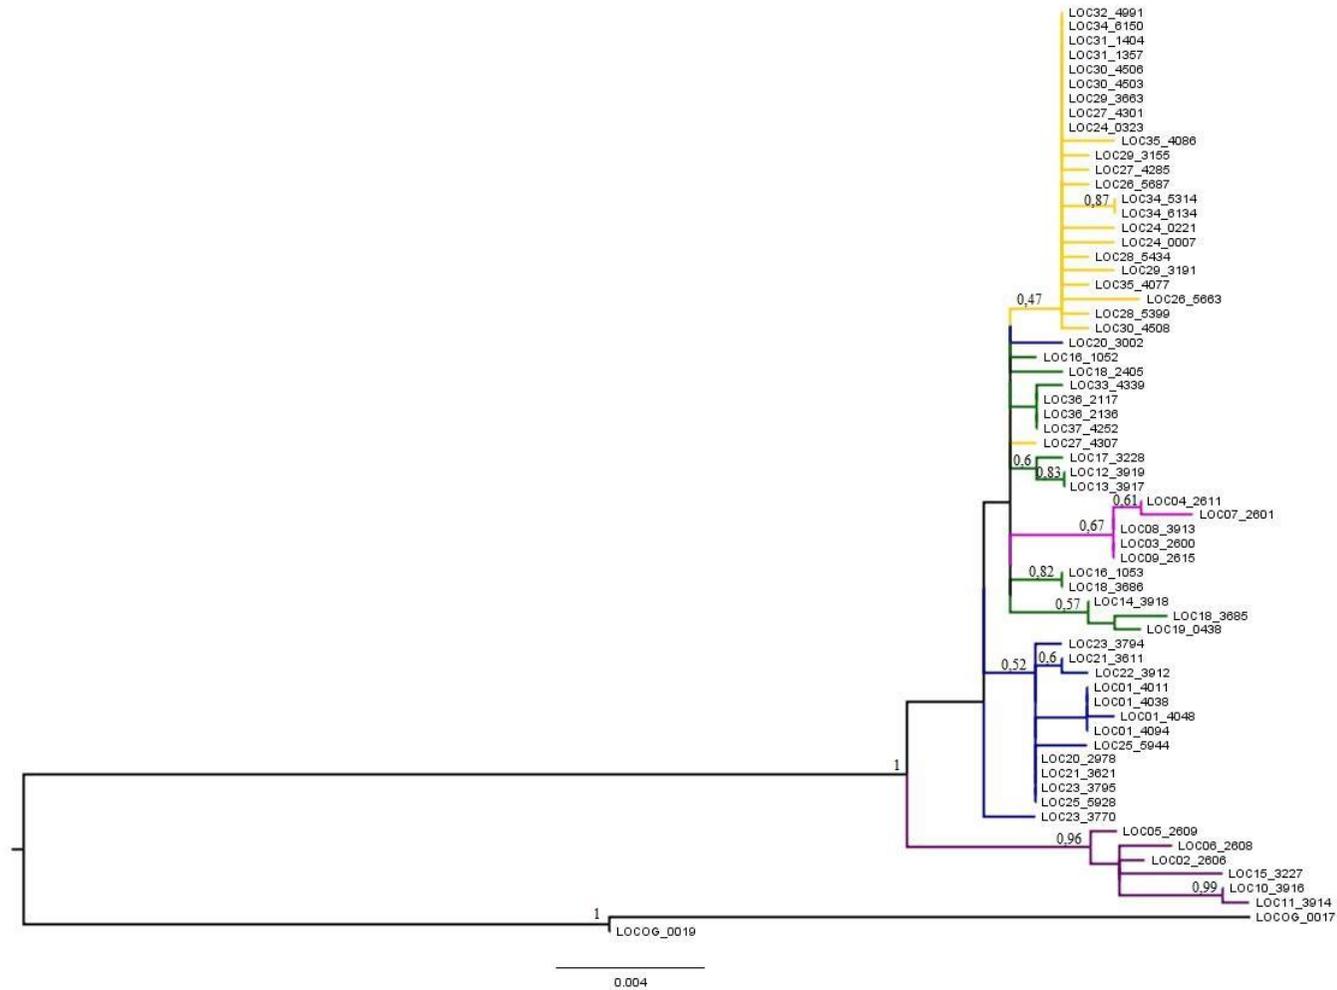

Figure S2. Maximum likelihood phylogenetic tree showing the *Lepidocolaptes angustirostris* lineage relationships. Support values are shown in each node. The colors correspond to populations defined by genetic structure analysis: Caatinga (purple), W_Cerrado (blue), NE_Cerrado (pink), Chaco (yellow) and E_Cerrado (green).

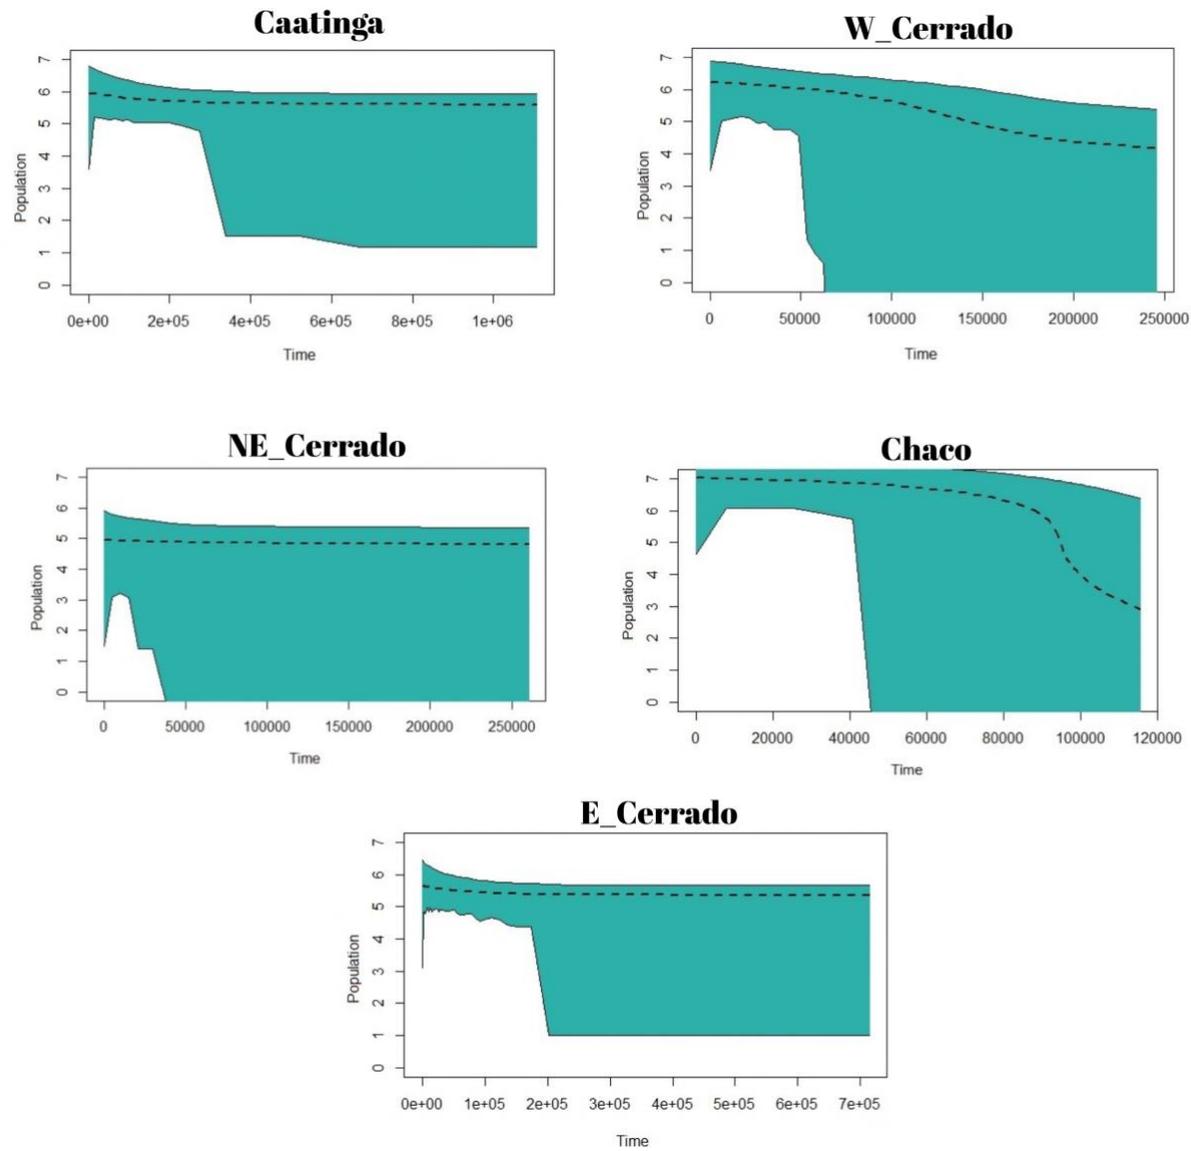

Figure S3. Extended Bayesian Skyline Plot analyses showing the trend of effective population size through the time (dashed line) for different genetic lineages of *Lepidocolaptes angustirostris* identified in this study. The standard deviation is represented by green block.
