Node labels are corresponding to Appendix 2, Figure A1. The probability less than 0.7 was in red italic.

The ancestral state with its likelihood probability (Lp) for each major node was given based on four criteria of CB species (i.e. Known, Known+Suspect, Known+Suspect+Inferred, and Ligon and Burt's CB species).

The most probable ancestral state of each major node was in bold.

Appendix 2

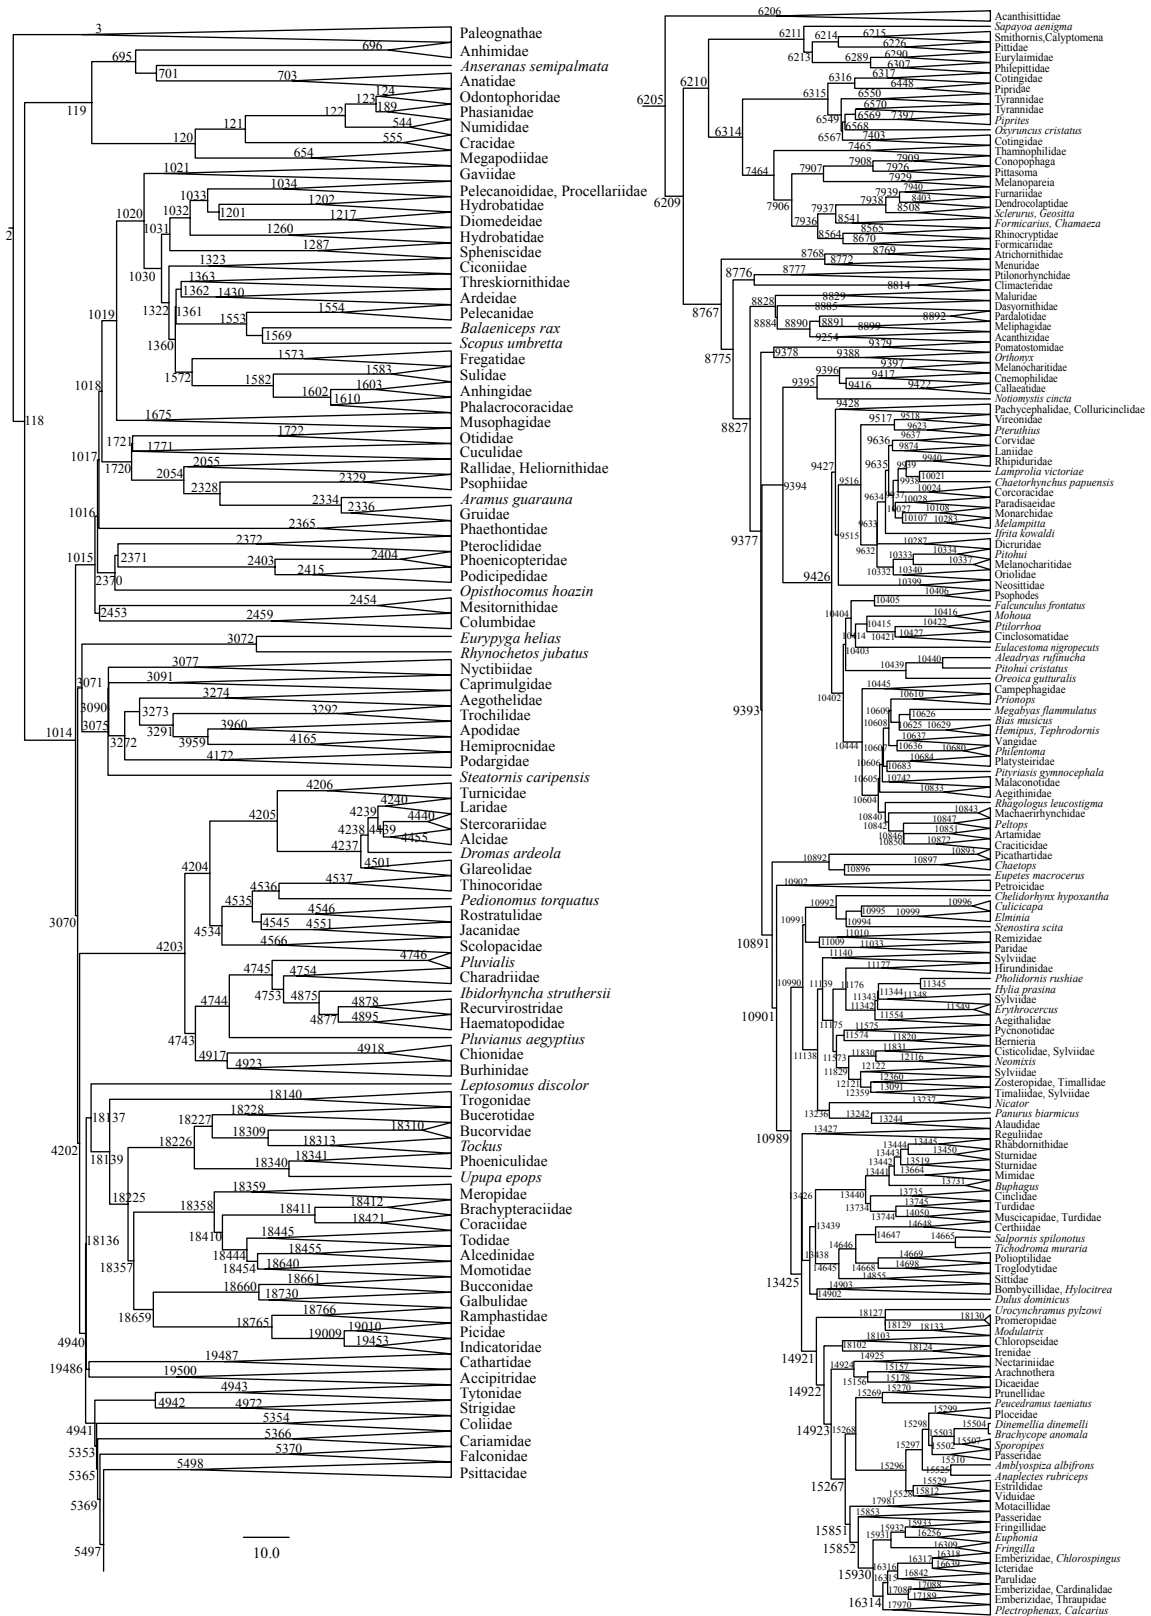

Figure A1. Character reconstruction on the avian phylogeny of Jetz et al. (2012)

Trees were mainly collapsed to families; when families were not monophyletic (especially in Passeriformes, the right part of the tree), major clades were shown. Major nodes were labeled with numbers, and the corresponding states (with likelihood probability) of these nodes can be found in Appendix 1, Table A2.
