

Supplementary material

APPENDIX 1: Parasitised host clutches and koel eggs used in the study. “Collection” includes eggs measured from the Australian National Wildlife Collection (“ANWC”), CSIRO, ACT, eggs measured fresh from the field (“Fresh”), and eggs collected from Sydney and blown prior to measuring (“Blown”). Clutch size is the full clutch size as it was discovered in the field (some host eggs may have been removed by the koel during parasitism) and does not necessarily indicate how many eggs were actually measured. “Measured” indicates in which analyses the eggs were used (the size, colour, or pattern analyses). For “State”: “NSW” = New South Wales and “QLD” = Queensland. “Unknown” indicates the information in that column is unknown for that egg.

APPENDIX 2: Unparasitised host clutches used in the study. “Collection” includes eggs measured from the Australian National Wildlife Collection (“ANWC”), CSIRO, ACT, eggs measured fresh from the field (“Fresh”), and eggs collected from Sydney and blown prior to measuring (“Blown”). Clutch size is the full clutch size as it was discovered in the field and does not necessarily indicate how many eggs were actually measured. “Measured” indicates in which analyses the eggs were used (the size, colour, or pattern analyses). For “State”:

“ACT” = Australian Capital Territory, “NSW” = New South Wales, “QLD” = Queensland, “SA” = South Australia, “VIC” = Victoria, “WA” = Western Australia. “Unknown” indicates the information in that column is unknown for that egg.
